

# ROTARY PASTEURIZER

FOR CRAFT INDUSTRY CAN LINES

For over 30 years, IDD has been an advocate for flash pasteurization, designing and manufacturing a full range of fully automatic Flash Pasteurization systems. We strive to meet the demands of the beverage industry large and small while fulfilling the craft industry's unmet needs.

## WE LISTEN, LEARN & INNOVATE

Tunnel pasteurization systems have been the standard for North American manufacturers. However, a small system has not been practical for the craft industries due to cost and space required.

We have thought outside the box and come up with a system to keep the footprint small, the energy consumption lowered, and the efficiency maintained. We're calling it the **Rotary Pasteurizer (RP1)** with series multiples for the future.

**"WHERE IDDEAS BECOME REALITY"**

**PROTOTYPE: AVAILABLE 2022**

## FEATURES & BENEFITS

- Compact – 12' L x 9' W x 8' H
- For 12 oz can sizes
- 72 x 6 stations per wheel
- 432 cans capacity per wheel
- 35 cans per minute per wheel nominal outputs
- Manual & automatic can feed options
- Available in single or multiple wheel configurations
- Up to 100 PU's
- Temperature and speed adjustable
- Steam water heating
- Temperature control and setting
- Water recirculation & recovery systems
- Continuous water sanitizing
- 72 point indexing drive
- Optional can feed and discharge systems
